## The invoice message

This specification provides the definition of the invoice message (INVOIC) to be used in Electronic Data Interchange (EDI) between Gnotec and trading partners.

The document contains only these segments and data elements used by Gnotec.

This documentation is a real subset of the EDIFACT message of directory D03A.

## Functional Definition

The invoice message is a message from a Gnotec supplier to Gnotec giving details about the amount claimed as payment for the goods being shipped by the supplier. One INVOIC message should refer to one DESADV message. No additional amounts except the parts ordered in the DELFOR message should be presented in the invoice. An exception from this rule may apply after an agreement as explained below.

***The below rules should only be used in agreement with each specific Gnotec plant.***

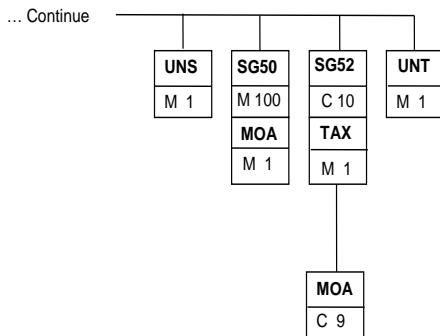

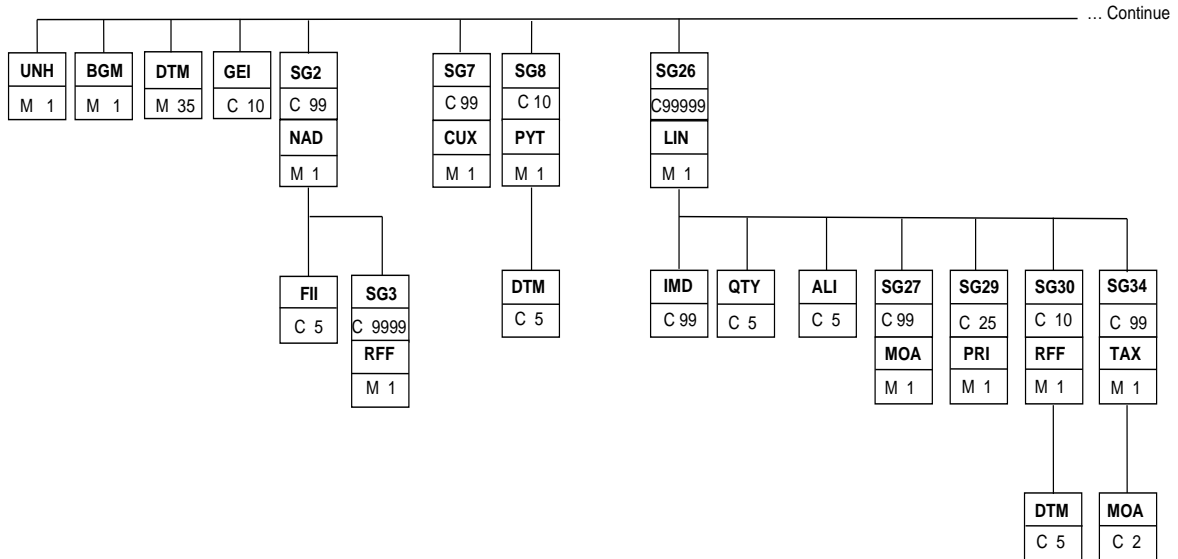

- If additional cost must be used for some reason then the following extra costs are allowed:

<i>Part No</i>	<i>Description</i>
999999_1	Pallet
999999_11	Pallet (small)
999999_2	Frame
999999_21	Frame (small)
999999_3	Lid
999999_31	Lid (small)
999999_4	Min cost for surface treatment
999999_5	Set up cost

- Extra costs shall be invoiced and charged in the same way as any other ordered part (using the part numbers listed above). The seller shall provide a pricelist for these extra costs.

The contents of this message will show the Gnotec requirements of the INVOIC message and include specific notes and comments to the use of each segment, data element and codes.

## Branching diagram of used segments and segment groups

M = Mandatory  
C = Conditionally

## Data Segment Clarification

This section should be read in conjunction with the Branching Diagram and the Segment Table which indicate mandatory, conditional and repeating requirements.

The following guidelines and principles apply to the whole message and are intended to facilitate the understanding and implementation of the message:

All specified dates/times should be in the format 'ccyymmdd'/'hhmm' unless all parties involved in the transaction agree that there is a functional requirement for an alternative format.

Where a choice of code or text is given only the code element should be used wherever possible.

Conditional data that is not required in the message should not be included.

Care must be taken that the segment qualifier in dependent segments do not conflict with the segment qualifier of the trigger segment of a group.

Free text information within the message should be avoided as this inhibits automatic processing.

### Reading instructions

<b>Tag</b>	Data elements or composite data elements or both as applicable.
<b>Name</b>	Segment, composite or element name.
<b>M/C</b>	Restrictions by EDIFACT standard - mandatory or conditional.
<b>Format</b>	Element format.
<b>R/D</b>	Restrictions by Gnotec standard – required or dependent.
<b>Value</b>	<b>Bold</b> indicates a constant otherwise an example value.
